

Magnetic strain gauge SM-1

It is intended for measuring the deformation of various constructions, as tensosensitivity element is used wire rope (or a wire), fixed on this construction, operating principle is based on the relationship between magnetic parameters of the ferromagnet with its deformation

Technical characteristics:

Gauge factor:	up to 50.
Power:	accumulators or AC 220 V.
Overall dimensions, mm:	
electronic unit	220 x 180 x 120.
outside diameter	
Weight, kg:	
electronic unit	1,2.

Developer – The State Scientific Establishment "Institute of Applied Physics, National Academy of Sciences of Belarus"
